Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Molecule type: mRNA
A; Residues: 1-144, L'.146-266 <AND>
C; Comment: This protein lacks a conventional signal sequence for protein export. Clea
ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C; Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     lymphokine; macrophage; mitogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Miseference number: 155969; WUID:87058957 AAAccession: 155969; WUID:87058957

A;Residues: I18-269 <DAU>
C;Comment: This protein lacks a conventional signal sequence for protein export. Cleavag ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C;Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-la

Alteraleukin-1 beta precursor - rabbit
NAlteraleu annes: hematopoietin-1; II-1 beta: lymphocyte proliferation potentiating
C.Species: Oryctolagus cuniculus (domestic rabbit)
C.Species: Oryctolagus cuniculus (domestic rabbit)
C.Species: Oryctolagus cuniculus (domestic rabbit)
C.Species: Any 1989 #sequence_revision 22-Nov-1996 #text_change 22-Jun-1999
C.Accession: A27714: A30584; JU0082; A32166
Biochem. Biophys: Res. Commun. 150, 1277-1243, 1988
A.Title: CLoning and sequence analysis of a cDNA for lymphocyte proliferation potenti
A.Reference number: A27714; MUID:88134238
A.Accession: A27714
A.Status: not compared with conceptual translation

C; Comment: This protein lacks a conventional signal sequence for protein export. Clea C; Comment: This protein.lbeta, unlike interleukin 1-alpha, is inactive.
C; Comment: Interleukin-1beta precursor is less heavily myristoylated than interleukin C; Superfamily: interleukin-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C;Comment: Interleukin-1Deta precessor -- -- C;Comment: Interleukin-1

A. Fritile: Crystal structure of recombinant human interleukin-lbeta at 2.0 angstrom res A; Reference number: A44666; MUDD:90064332

A:Contents: annotation; X-ray crystallography, 2.0 angstroms
C; Comment: This protein lacks a conventional signal sequence for protein export. Cleaved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C; Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin C; Genetics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     C;Keywords: cytokine; immunoregulation; inflammation; lipoprotein; lymphokine; macrop F:117-269/Product: interleukin-1 beta #status experimental <1118-7 F:16/Binding site: myristate (199) (covalent) (partial) #status experimental F:124/Binding site: arbohydrate (Asn) (covalent) #status absent

tent No. 6053600

ENERAL INFORMATION:
APPLICANT: Fuelter, Gerald M
APPLICANT: Fuelter, Nelson L.
TITLE OF INVENTION: DNA Encoding Canine Interleukin-1 Receptor.
TITLE OF INVENTION: Antagonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ADDRESSEE: Douglas C Murdock/ Bradley, Arant, Rose & White STREET: 2001 Park Place, Suite 1400 CITY: Birmingham

                                                                                                                                                                                                                                                                                                                                                                                  0;
fever and to stimulate the immune system for the treatment of microbial
                                                                                           polypeptides and nucleic acid molecules encoding such polypeptides. FIL-1 theta DNA is used to identify glaucoma, insulin dependent diabetes mellitus, ectodermal dysplasia, T-cell leukaemia/ Lymphoma, wrinkly skin syndrome and tibial muscular dystrophy. FIL-1 theta polypeptides are used to activate and/or inhibit the activation of vascular endothelial cells and lymphocytes; the induction of local tissue destruction and fever; the stimulation of macrophages and vascular endothelial cells to produce IL-6 and the induction of prostaglandins. They are also used to treat inflammation and microbial infections. FIL-1 theta DNA is useful in antisense therapy and gene therapy. The present sequence is human FIL-1 theta full-length protein.
                                                                                relates to interleukin-1 (IL-1) family ligand designated

The pressure sequence is that it is that it is the pressure sequence is predicted from isolated CDNA clones (see AAA89175 and AAA89176. Potential polymorphisms in the coding region may alter the sequence, specifically changing Thr-44 to Ile and Asp-51 to Ala, which may affect the biological activity of the molecule. An alternative, extended open reading frame encodes a 200-amino acid protein (see AAB19924). IL-1 HV2 polypeptides and polynucleotides are used to treat cancers involving elevated levels of IL-1, such as the adenocarroinoma, brain tummurs, melanoma, agiant cell tummours of bone, acute myelogenous leukaemia, oral epidermoid carcinoma or squamous cell carcinoma, and inflammatory disease mediated by interleukin-18 (all claimed). They can also be used to diagnose, prevent or treat shock, thrombosis, acute pancreatitis, pancreatic vasculitis, lupus, immune complex glomerulonephritis, pancreatic cell damage, allograft and xenograft transplantation, graft versus cell damage, allograft and xenograft transplantation, graft versus cost disease, inflammatory bowel disease, bone degenerative diseases, diabetes and neurodegenerative disorders.
                                                                                                                                                                   for diagnosing, inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 IQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFTFFQSSSGSAFRLEAAAWPGW 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                The present sequence is that of a human interleukin-1 Hy2 (IL-1 Hy2)

Conorfull length polypeptide, as predicted from an isolated cDNA clone (See AAAB9175). A 200-amino acid full-length sequence is given in AAB1994. IL-1 Hy2 is a novel member of the interleukin-1 receptor antagonist family. IL-1 Hy2 polypeptides and polynucleotides are used to treat cancers involving elevated levels of IL-1, such as breast adenocarcinoma, brain tumours, melanoma, giant cell tumours of bone, acute myelogenous leukaemia, oral epidermoid carcinoma or squamous cell carcinoma, and inflammatory disease mediated by interleukin-18 (all claimed). They can also be used to diagnose, prevent or treat shock, thrombosis, acute pancreatitis, arthritis, vacultiis, lupus, immune complex glomerulonephritis, pancreatic cell damage, allograft and xenograft transplantation, graft versus host disease, inflammatory bowel disease, bone degenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;

The present sequence is that of human interleukin-1 Hy2 (IL-1 Hy2), a novel member of the interleukin-1 receptor antagonist family. The sequence is predicted from the genomic DNA sequence (see AAA89177) and a predicted cDNA sequence (see AAA89177) and a predicted cDNA sequence (see AAA89178). An alternative open reading frame (see AAA89176) encodes a 152 polypeptide (see AAA891222). IL-1 Hy2 polypeptides and polynucleotides are used to treat cancers involving elevated levels of IL-1, such as breast adenocarcinoma, brain tumours, melanoma, giant cell tumours of bone, acute myelogenous leukaemia, oral epidermoid carcinoma or squamous cell carcinoma, and inflammatory disease mediated by prevent or treat shock thrombosis, acute pancreatitis, arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide encoding interleukin-1 Hy2 for diagnosing, preventing and treating disorders, such as cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 IQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFTFFQSSSGSAFRLEAAAWPGW 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides novel polypeptides (NOVX) selected from human transmembrane protein (NOVERAN), neuromedin peptide (NOVERER), gonadotropin-like protein (NOVERAN), neuromedin peptide (NOVERER), methods in which a NOVX polypeptide, polynuclectide and antibody are used in which a NOVX polypeptide, polynuclectide and antibody are pathological states. NOVTRAN can be used to treat is a cell signaling disorder such as cancer, immune response disorder, hematopoietic clasorder, immune response disorder, neurodegenerative disorder, neurologic disorder, cancers of central nervous system, breast, colon, ovary, kindrey, prostate and thyroid. NOVGON can be used to treat reproductive development disorder, thyroid. NOVGON can be used to treat reproductive development disorder, metabolic function disorder and melanoma. NOVINTRA A and B can be used to treat bone metabolism or structure disorder, immune regulation disorder, septic shock, stroke, diabetes, arthritis and cancer. The present sequence represents the NOVINTRA A and antirities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to interleukin-1 (IL-1) family ligand designated as FIL-1 theta polypeptides and nucleic acid molecules encoding such polypeptides. FIL-1 theta DNA is used to identify glaucoma, insulin dependent diabetes mellitus, ectodermal dysplasia, T-cell leukaemla/lymphoma, wrinkly skin syndrome and tibial muscular dystrophy. FIL-1 theta polypeptides are used to activate and/or inhibith the activation of vascular endothelial cells and lymphocytes; the induction of local tissue destruction and fever; the stimulation of macrophages and vascular endothelial cells to produce IL-6 and the induction of prostaglandins. They are also used to treat inflammation and microbial infections. FIL-1 theta DNA is useful in antisense therapy and gene therapy. The present sequence is mouse FIL-1 theta protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 IQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFTFFQSSSGSAFRLEAAAWPGW 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of mouse interleukin-1 Hy2 (IL-1 Hy2), as predicted from the genomic DNA sequence (see AAA89179). IL-1 Hy2 as a novel member of the interleukin-1 receptor antagonist family. The predicted mouse and hunan (see AAB19922) IL-1 Hy2 polypeptides share 81.7% homology. Murine genomic DNA can be used to generate transgenic animals which overexpress IL-1 Hy2 protein or have the IL-2 Hy2 gene knocked out. Human IL-1 Hy2 polypeptides and polynucleotides are used to treat cancers involving elevels of IL-1, such as breast adenocarcinoma, brain tumours, melanoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 IQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFTFFQSSSGSAFRLEAAAWPGW 120

isolated FIL-1 theta polypeptide to induce or inhibit the induction of fever and to stimulate the immune system for the treatment of microbial infections -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to interleukin-1 (IL-1) family ligand designated as FIL-1 theta polypeptides and nucleic acid molecules encoding such polypeptides. FIL-1 theta DNA is used to identify glaucoma, insulin dependent diabetes mellitus, ectodermal dysplasia, T-cell leukaemia/lymphoma, wrinkly skin syndrome and tibial muscular dystrophy. FIL-1 theta polypeptides are used to activate and/or inhibit the activation of vascular endothelial cells and lymphocytes; the induction of local vissue destruction and fever; the stimulation of macrophages and vascular endothelial cells to produce IL-6 and the induction of prostaglandins. They are also used to treat inflammattion and microbial infections. FIL-1 theta DNA is useful in antisense therapy and gene therapy. The present sequence is human FIL-1 theta protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               41 KICTLPNRGLDRTKVPIFLGIQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFT 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This represents a rodent interleukin (IL)-1 delta polypeptide. The invention relates to a recombinant polypeptide that specifically binds polyclonal antibodies (Abs) generated against a 12 consecutive amino acid segment of IL-1 delta or IL-1 epsilon. Agonists or antagonists of these IL polypeptides are used to regulate a cell involved in an inflammatory response. The IL-1 delta or IL-1 epsilon polypeptides and peptides are used to regulate a cell involved in an inflammatory the corresponding nucleic acids regulate development and/or the immune system, and can be used to diagnose and treat conditions associated with abnormal expression of IL. Agonists or antagonists of IL-1 delta or IL-1 epsilon polypeptides are used with agonists or antagonists of IL-1 delta or IL-1 il-1RA, IL-1 beta, IL-1 gamma, IL-2 and/or IL-12. The IL-1 delta or IL-1 epsilon polypeptides may be used as a soluble polypeptide or as a fusion protein with another cytokine or chemokine.

```
The present sequence represents mouse interleukin 1 delta (IL-1 delta).

IL-1 delta proteins are useful for the determination of the molecular weight of a sample protein. The protein and its fragments are useful as controls for peptide fragmentation. This is useful for determining the isoelectric point of a sample protein. Antibodies generated against in 1-1 delta and its fragmented peptides can be used to enhance the accuracy of these molecular weight markers to determine the apparent molecular eight and isoelectric point of a sample protein. IL-1 delta can be used to screen for por potential inhibitors of activity associated with IL-1 delta counter-structure molecules. IL-1 delta can also be used as the apparent of diseases mediated by IL-1 of elta. IL-1 delta may be used as a reagent to block IL-1 signalling pathway, or as a reagent to block IL-1 signalling pathway, or as a reagent to block IL-1 signalling and to identify quenes associated with certain diseases, especially with region 2411-12, including glaucoma, ectodermal dysplasia, insulingependent diabetes mellitus, wrinkly skin syndrome, I-cell leukemia/
Imphoma and tibial muscular dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     60 GIQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFTFFQSSSGSAFRLEAAAWPG 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MCSLPMARYYIIKYADQKALYTRDGQLLVGDPVADNCC-AEKICTLPNRGLDRTKVPIFL 59

by probe generated from the DNA sequence by PCR using AAA09199-200 was used to analyze human northern blots.

It is believed that zilia3 acts through IL-1 receptors. In general, cz zilia3 proteins having a Lys residue at position 148 will have may avoid a triniflammatory activity (e.g. AAY92256), whilst those having Asp cc catton. Zilia3 is used to modulate an immune response in an animal catton. Zilia3 is used to modulate an immune response in an animal corporation. Antagonists zilia3 is position will have pro-inflammatory diseases such as rhematoid arthritis, costeoarthritis and Lyme arthritis, sociame may be used to treat or prevent corporations. The antagonists such as rhematoid arthritis, costeoarthritis and Lyme arthritis, sporiasis, to reduce tissue damage after ischemia, to treat septic shock, graft-versus-host disease and clevemia. The antagonists may also alleviate inflammatory bowel disease cincluding crohn's disease and ulcerative colitis, insulin-dependent diabetes mallitus, acute pancreatitis, glomerulonephritis and cerebral schemia. Agonist forms of zilla3 may promote wound healing by IL-1 effects on growth factor secretion and cell proliferation. They may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Proteins useful for treatment of inflammatory conditions such as rheumatoid arthritis and psoriasis are agonists or antagonists forms of

RESULT 12 AAY45061

Sequence 156 AA;

3,

```
The present sequence is the murine TANGO-93, a secreted protein, that belongs to the cytokine superfamily. It plays a role similar to secreted Interleukin-1 receptor antagonist (IL-1ra) and its expression is developmentally regulated in liber, heart and bone marrow. TANGO-93 conditions mediated inflammation and IL-1 gene or protein expression. TANGO-93 is useful as a modulating agent for regulating expression. TANGO-93 is useful as a modulating agent for regulating expression. TANGO-93 is useful as a modulating agent for regulating cellular processes like asthma, graft vs-host disease, rheumatoid arthritis, psoriatisis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, osteoarthritis, Lyme disease, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme disease, cachexia, and autoimmune diseases e.g. mysathenia gravits, autoimmune diseases and systemic lupus erythematosus. Partial TANGO-93 sequences are useful in forensic biology, for diagnostic and prognostic assays, prophylactic and therapeutic treatment and pharmacogenomics. The DNA sequences are useful as hybridisation probes and primers, for isolation of TANGO-93 sequence and for the creation of transgenic animals.
                                                                                                                                                                    TANGO-93; cytokine; mouse; secreted protein; IL-1 expression; cancer; Interleukin-1 receptor antagonist; IL-Ira; inflammation; antiasthmatic; immunosuppressive; antirhemmatic; antiarthritic; antipsoriatic; asthma; antilnflammatory; antibacterial; antiulcer; cytostatic; immunomodulator; osteopathic; defmatological; antidiabetic; psoriasis; ulcerative colitis; graft vs-host disease; rheumatoid arthritis; inflammatory bowel disease; septic shock; cachexia; Crohn's disease; chronic myelogenous leukaemia; liver disease; diabetes; osteoarthritis; inflammatory bowel disease; autoimmune disease; myasthenia gravis; pharmacogenomic; diagnosis; systemic lupus erythematosus; forensic; transgenic animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to recombinant antigenic interleukin-1 like molecules and their corresponding nucleic acid sequences, designated as interleukin-lebta [LI-100-16] and interleukin-lepsilon (IL-100-16).

IL-100-16 and IL-100-16 and interleukin conditions exhibiting abnormal expression of the interleukin such as immunological disorders, tundururs, inflammatory disorders, fever, hypoglycaemia, psoriasis, tundururand diseases and infectious diseases (e.g., pulmonary tuberculosis, leprosy, fulminant hepatitis, and viral infections such as the production also relates to methods of using the composition containing IL-100-16 and immunogen for the production of antisera or antibodies specific, e.g., capable of distinguishing between IL-1 family members and an IL-100-16, e.g., capable of distinguishing between frament of the production of antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous cytokine. The invention also contemplates the use of competitive drug screening assays. The present sequence is mouse interleukin-100-11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immunological disorder; tumour; inflammatory disorder; hypoglycaemia; autoimmune disease; pulmonary tuberculosis; fulminant hepatitis; leprosy; psoriasis; viral infection; allergy; cytokine; HIV; drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated or recombinant antigenic interleukin-1 delta or epsilon polypeptide useful for treating conditions exhibiting abnormal expression of interleukin such as immunological disorders, tumor and

```
the isolated nucleate actual molecule encousing an interleaval—like
polypeptide (IL-IIp) that retains one or more activities of the peptide
from which it is derived, such as the IL-18R binding activity of a human
interleavin-1 receptor antagonist—I (MIL-18R) polypeptide is new. The
nucleic acids may be used in molecular engineering applications, e.g.

hybridization assays and chromosome and gene mapping studies, for
combinantly producing the IL-11p polypeptide or for producing gene
knock out animals to study the role of the protein in metabolism and
disease processes (conversely, gene therapy protocols may be used to
supplement a patients production of the polypeptide or to rectify
mutations that lead to the production of in active peptides). The
peptides produced may be used to screen for and produce modulators (e.g.
antibodies) of IL-11p protein expression and activity which may be use
to treat disorders associated with inappropriate IL-11p expression and
activity, such as inflammatory disorders, asthma, arthritis,
setsoathritis, sepsie, acute lung injury, adult respiratory distress
syndrome, idiopathic pulmonary fibrosis, ischemic reperfusion disease.

sociasis, graft versus host disease and/or inflammatory bowel disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of the human and murine interleukin-IL1 (IL-IL1) proteins. The IL-IL1 gene is located between the IL-Ibeta and IL-Ireceptor genes at human chromosome 2q13. The sequences are useful in the diagnosis, prevention and treatment of heart disease, cancer and inflammatory diseases such as rheumatoid arthritis, systemic lupus erythemators, inflammatory bowel disorder, diabetes, psoriasis, osteoporosis, lichen sclerosis, ulcerative colitis, severe periodontal disease and pregnancy complications. The present sequence is the murine IL-IL1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                   Mouse; IL-TLI; interleukin-1 locus; IL-1beta; IL-1receptor; psoriasis; chromosome 2413; inflammatory disease; heart disease; Graves' disease; rheumatoid arthritis; inflammatory bowel disorder; diabetes; cancer; osteoporosis; systemic lupus erythematosus.

/note—'Cogan: pooled: Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I: Site_2: Eco RI: Equal amounts of plasmid DNA from three normalized libraries (fetal lung NBHL19W, testis NHT, and B-cell NUI_CGAP_CGB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, Sates and M. Fatima Bonaldo.
